

## South East London Community Energy: Greener Greenwich Summit

## Figure 1: Sources of Greenhouse Gas Emissions in Royal Greenwich in 2019

Emissions (kilotonnes CO<sub>2</sub>/year)

Do 1 thing:  
Every BIG  
Helps

---

# Our Mission

Transition to an energy system that is fit for the future

- distributed and renewable energy
- Reductions in energy demand
- Leave no one behind

# Selce brings some magic ingredients

- Social Innovation: use of community sector strategies to enable the systemic change
- Coop structure – enables ownership and democratic control
- Community share capital
- Volunteer hours – over 10,000 (we stopped counting)
- Tenacity
- Local knowledge
- Local networks
- ...and a whole heap of love

- ✔ Future-proof your home
- ✔ Lower your carbon footprint
- ✔ Conserve energy
- ✔ Reduce your bills

**Our Future Fit Home service offers:**

- Home energy audit, tailored advice and costed savings
- Thermal imaging of your home
- Retrofit Coordination (Project management of home energy improvement works)
- Approved contractors

Any financial surplus helps fund a similar service creating warmer homes for vulnerable households in SE London.

# Do 1 thing

- If you are on a low income and struggling to pay for electricity or gas...
- If you own a home that is not fully insulated...
- If you manage a community building that does not have solar PV or LEDs
- If you are a business wondering how to reduce your emissions...
- If you want to collaborate on making Greenwich cleaner greener and better equipped for the future...

Like so many palms raised in prayer  
our panels commune with the sky  
Whisper incantations in the language  
of positive, negative, and semi-conductors  
A dance of electrons to the beat of the sun

And we did this. This solar array is made of  
persistence; a stomp through complexity.  
We learned to speak the language of leases,  
of community shares, of kWh hours, of financial models,,  
of grid connections, and of risk profiles. And it cost us dear

But it isn't enough, it's a drop in the ocean  
compared to what's needed to arrest the flow  
of drops into the ocean from the melting icecaps.  
A tiny stitch to mend a deep fissure  
Maybe just maybe it's all too late

But we're not alone. We are just one of many  
community groups making tiny stitches  
Turning churches, rivers and hills into places  
where magic can happen: where sun and wind  
becomes power and hope. We ain't giving up
